Workgroup PDM Clients

	SolidWorks Workgroup PDM Client Add - In
	SolidWorks Explorer with Client Or Contributor Add-In
	SolidWorks Workgroup PDM Viewer License

Workgroup PDM client programs are how users access the vault. Each user, regardless of client style, must have access to the machine running the vault service in order to access any data.

SolidWorks Workgroup PDM Client add-in for SolidWorks allows user full access to input, manage, change and maintain SolidWorks files in the vault. **This is for all SolidWorks users.** *SolidWorks Professional and SolidWorks Premium both include the client add-in.*

SolidWorks Workgroup PDM Contributor add-in allows users to manage data, change properties and attach non-SolidWorks files. **This is for non-SolidWorks users.**

The contributor is purchased separately and can be licensed standalone or run from a SolidNetWork License Manager.

SolidWorks Workgroup PDM Viewer allows read-only web access to the vault. **This is for viewing and printing only. This has no access to make changes.**

The viewer portal is loaded on to the vault server and uses Microsoft Internet Information Services (IIS) as the host. The client is purchased in bundles of 5 and uses Internet Explorer to access the service.

This document covers loading the **Client** programs used to access the SolidWorks Workgroup PDM Vault. Please be sure you have the vault installed and running on your server before installing the client. The users must have access to a server running the Vault service to manage data. See our SolidWorks Workgroup PDM vault installation guide.
